Render charts to PDF Completed

- R. te Kaat
- **Forum name:** #GemBox.Document Feature Request

Charts are not preserved when saving to PDF. I use Gembox for conversion to PDF only and for me this would be a very nice feature. It would not be a problem if only a subset of chart-types are supported. The most basic ones are most used anyway.

Also, it should use the cached values, or at least support using these values, since those are the ones that my application currently modifies when rendering charts to documents.

Hi, Currently, charts are only supported by our other component (GemBox.Spreadsheets):

<https://www.gemboxsoftware.com/spreadsheets/examples/c-sharp-vb-net-create-excel-chart/301> With it, you could read the required chart from the excel file and export it as an image file which you could then add to your document. Regards, Mario
