GemBox Support Center

Support internal and external CSS in HTML Completed

- Cole McCain
- **Forum name:** #GemBox.Document Feature Request

Previously, my coworker spoke to you on this. He conveyed that GemBox.Document does not seem to respect css padding when exporting to pdf. Just as he did before, I have tried to export to pdf using the GemBox.Document Word editor using html code, however the styling was ignored. The editor displays the code properly, however the exported pdf does not. Here is the code I tried with the editor.

<div ><div ></div>test1<div >test2</div></div> <div ><div ></div>test1<div >test2</div></div> <div ><div ></div>test1<div >test2</div></div>

Each line should generate something that looks different, however, it is all the same.
